                                                                                                                                                                                                                                                                                                                         SUBCELLUIAR LOCATION: Type I membrane protein (1soform 1);
Secreted (1soform 2).
ALTERNATIVE PRODUCTS: 2 1soforms; 1 (shown here), and 2; are
produced by alternative splicing.
TISSUE SPECIFICITY: Expressed in several endocrine tissues, mostly
in fetal and adult liver, kidney, pancreas, testis, colon, brain
and small intestine; not detected in peripheral blood leukocytes,
lymphold organs, and most cell lines.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                  .....CKADLGCRSYTDELHAVAPL 753
